

# CAMERA SETUP

*Please note: Some actions require you to just press buttons while others require you to press and hold.*

## STEP 1

Hold the POWER button to turn the unit on. The blue light on the camera will begin to slowly flash and it takes about 15 seconds to fully boot up.

## STEP 2

Hold the MODE button to change the screen to: "DUALFISHEYE PLUGIN JPG SINGLE". Press the shutter button to confirm the selection.

## STEP 3

Press the FN button to change the screen to: "DUALFISHEYE PLUGIN **DNG** SINGLE"

## STEP 4

Press MODE button 3 times to toggle: "HDR-DNG 3"

## STEP 5

Press WIFI button 1 time to toggle: "HDR-DNG **5**"

## STEP 6

Hold WIFI button to activate 10-second timer.

## READY!

The camera is now ready to use. When you press the SHUTTER button, it will begin a 10-second timer and then shoot 5 separate images. Following 6 distinct beeps (this lasts about 40 seconds), the photo capture will be complete and the camera will begin merging the shots into 1 HDR image. At this point, the screen will show "Processing..." and you are free to move the tripod.
